

Software Test Document

WildTrack | Synthetic benchmark fixture | STD-18_incomplete-no-template

Synthetic benchmark fixture. Content below is controlled test material, not evidence that real software testing occurred.

Software Test Document

WildTrack synthetic no-template pilot fixture

Overview

WildTrack is a capstone submission workflow that lets configured students submit link-based deliverables, lets advisers review responses and Document Check findings, and lets Admin users manage academic workflow configuration.

Planned checks

The synthetic test approach covers valid and invalid submissions, missing required values, access failures, stale edits, authorization boundaries, and representative UI flows. Expected outcomes are defined before the synthetic run and actual observations belong in the test log.

Unfinished material

The remaining validation evidence and actual execution results are not supplied in this document. No official template is assumed by this fixture.
